WORK EXPERIENCE

ZS Associates – Advanced Data Science Associate

Sep 2025 – Jan 2026

- Engineered probabilistic enrichment workflows to infer lung cancer patient cohorts from sparse claims data, moving beyond deterministic business rules to probabilistic identification.
- Built and validated supervised and PU-based classifiers to enrich multiple lung cancer stages, metastatic states, and surgery-related cohorts, delivering 2-8× uplift over rule-based baselines.
- Optimized models using recall-prioritized objectives, masked validation strategies, and systematic error analysis, consistently achieving 75–99% recall across cohorts.
- Quantified model credibility by statistically benchmarking enriched cohorts against external industry references, reducing variance to 1–2% across multiple lung cancer populations.
- Operationalized inference outputs into deployable population definitions to enable forecasting, treatment-pathway analysis, and indication tracking for lung cancer portfolios.

Ibmd Systems Private Limited – Software Development Engineer I

Sep 2024 – Jul 2025

- Spearheaded development of RAG pipelines combining FAISS/BM25 retrievers and fine-tuned LLMs (LLaMA-2, Mistral-7B, Gemini 1.5 Pro) for multilingual document comprehension, reducing hallucination by 40%
- Designed multi-agent GenAI workflows using MCP and A2A patterns for dynamic task delegation and long-horizon reasoning in financial document processing
- Fine-tuned open-source LLMs Falcon-7B, Mistral-Instruct using LoRA and QLoRA on domain-specific corpora for invoice summarization, classification, and NER, achieving a 30% accuracy boost over zero-shot baselines
- Architected agentic AI systems for structured meeting transcript analysis by combining tool-using LLM agents with prompt chaining, few-shot learning, and memory modules to reduce human validation efforts by 50%

Barracuda Networks – Software Engineering Intern

Mar 2024 – Jun 2024

- Automated GenAI-based regression testing by integrating prompt-tuned LLMs with traditional QA logic, reducing test cycle duration by 30%
- Developed Python-based log parsers and integrated LLMs for anomaly explanation in system diagnostics dashboards using Matplotlib, Seaborn, and Plotly
- Implemented robust CI/CD-compliant logging and validation modules to support Agile-based iteration in GenAI test infrastructure

SKILLS

Technical Skills: Python (NumPy, Pandas, Scikit-learn, TensorFlow, PyTorch), Machine Learning, Deep Learning, Computer Vision, Natural Language Processing, Generative AI, LLMs: Prompt Engineering, Retrieval-Augmented Generation (RAG), Low-Rank Adaptation (LoRA), Quantized LoRA (QLoRA) Search & Databases: SQL, Vector Databases, FAISS, BM25, Neo4j, Agentic AI: LangChain, LangGraph, CrewAI, Model Context Protocol (MCP), Agent-to-Agent (A2A) Communication. MLOps & Deployment: FastAPI, MLflow, Docker, Cloud: Google Cloud Platform (GCP), Visualization: Matplotlib, Seaborn

EDUCATION

Bachelor Of Engineering (AIML), Basaveshwar Engineering College, Bagalkot
CGPA: 7.62

2020 - 2024
